

## Rain Barrel Kit Installation Instructions

### Step

- 11 With lid on barrel, draw a circle atleast 6" in diameter (or 3" radius). Use one of the drill bits for a starter hole along the line drawn. Use a Jig Saw with a high speed/clean cut blade, to finish the cut. (Make sure you wear safety glasses and gloves, when using power tools).
- 12 Remove lid and clean out barrel. Unfold screen and place over barrel opening. Have someone hold the screen while twisting on the lid. The screen should tighten up as lid gets tighter. Make lid tight enough so children can not undo.
- 13 Install a garden hose on the overflow valve, and use the hose clamp to secure hose onto overflow valve. Direct overflow away from your home (or structure) and towards your garden or lawn.
- 14 Visit our website [www.GreenMojoEcoConsulting.com](http://www.GreenMojoEcoConsulting.com) to learn how to install your rain barrel. Scan QR code with smartphone, to visit website.
- 15 Use flexible elbow and self-tapping screws to direct water from down spout into your rain barrel.
